*As brands evolve,*  
the expectation is for each successive model to surpass the model before. The EgglestonWorks line is no exception to this lofty expectation. In fact, EGG.WORKS exemplifies a keen ability to improve upon designs that are already considered state-of-the-art. However, year after year, the EGG.WORKS design team accomplishes this very daunting task. This is done through careful analysis of previous design ideas as well as completely new thinking. The combination of re-evaluation and re-invention has

proven invaluable in the creation of the company's eight highly acclaimed and award-winning products.

So, it was with the latest speaker system that the design team looked again to the past and the future to find inspiration. Though the inspiration came from different sources, the focus was singular: to continue the tradition of quality products and again raise the bar for the rest of the industry.

To that end, we excitedly introduce *the nine*.

The latest EGG.WORKS creation.

### *Specifications*

- Frequency response is from -3dB @ 27 Hz to well beyond 24,000 Hz
- Efficiency is 88dB
